

Preventing Injuries Through Smart Maintenance

How HelixIntel Helped a Facilities Manager Avoid a Serious Playground Injury and Significant Financial Loss.

“

I put in a preventive maintenance work order to inspect the playground... and there's a chunk of steel sticking up on it. That just saved me a couple million-dollar lawsuit.

– Wade E., Facilities Manager in New York ”

Background

Wade E., a facilities manager in New York, previously relied on reactive maintenance, addressing issues only after they happened. With HelixIntel's preventive maintenance tools, he shifted to proactive inspections, which helped him identify risks before they escalated.

“

Our reactive maintenance is so high... we're usually fixing things after they break. But preventive tasks have saved us from some big problems.

– Wade E., Facilities Manager in New York ”

The Problem

Unseen Playground Hazards

During one of these new preventive maintenance inspections, Wade discovered a significant safety hazard on playground equipment: a sharp piece of steel protruding from a structure. Without HelixIntel's preventive maintenance setup, this hazard could have led to serious injury and a costly lawsuit.

HelixIntel's Solution

Proactive Safety Inspections

With HelixIntel's platform, Wade's team now conducts regular, preventive inspections. This proactive approach allows them to catch hazards early, reduce liability, and ensure the safety of those who use their facilities. "Making the time to go and do that before something happens, that's where the savings are," Wade explains.
